

Human Growth & Development Assessment (Level 2) Child Study Project

Gateways ECE Competencies	<p>HGD1: Identifies and describes theories of typical and atypical growth in all developmental domains and the interaction between individual and contextual factors on development and learning.</p> <p>HGD2: Describes the interrelationship between developmental domains, holistic well-being, and adaptive/living skills.</p> <p>HGD3: Defines how cultural, familial, biological, and environmental influences, including stress, trauma, protective factors, and resilience, impact children's well-being and learning.</p>
NAEYC Standards	1a, 1b, 2a
IPTS	1A, 1B, 1C, 1D, 1E, 1G, 1L, 2A, 2E, 2H, 3C, 3J, 3K, 3M, 3O, 4L

In this semester long project, you will learn about each domain of child development through a child study project. The goal of your Assessment is to determine competencies in connecting theory to children's unique growth patterns, understanding of how external and individual characteristics influence growth and development, the identification of the interrelationship between domains, and your ability to understand unique patterns of development and supportive practices,

This project will require pre-planning and scheduling in tandem with your course/clinical experience to work with one child and complete an in-depth assessment (i.e. ASQ, LAP, etc.) in each of the developmental domains.

Part 1: Pre-Assessment Planning & Parent Completion of the ASQ

Work with your course/clinical instructor to choose a child on which your child study project will focus. Also arrange to meet and explain the project to the child's parents or teacher, secure needed consent, and complete with them the age appropriate Ages and Stages Questionnaire for the child in your child study project.

Part 2: Completion of the Child Study Assessment

Arrange multiple (a minimum of seven times) during your clinical hours when you will work through one of the selected assessment tools outlined below with the goal of collecting assessment data in each development domain.

- Assessment instrument choices include the following:
 - **BRIGANCE Inventory of Early Development (3-5 year olds)** <http://www.curriculumassociates.com/products/detail.aspx?title=BrigEC-IED3-sum>
 - **Early Learning Scale** http://www.lakeshorelearning.com/general_content/general_info/ELSstatic.jsp?utm=offline
 - **Hawaii Early Learning Profile (HELP): 3-6 years (2nd Ed.) Extends HELP 0-3** <http://www.vort.com/>
 - **High/Scope Child Observation Record** <http://www.highscope.org/Content.asp?ContentId=2>
 - **Learning Accomplishment Profile-3 (LAP-3)** <http://chtop.org/Products/LAP-System/The-LAP-3.html>

• Use the following steps to guide your assessment:

◦ Calculate, using the child's birthdate, the baseline for beginning your screening.

(Today's Date: 5/5/16) - (Child's Birthdate: 1/6/12) = Child is 4 years/4 months old

Convert to months (52 months) - 6 months = 46 Months (baseline). Use this baseline age as your beginning point for screening the child in each domain. If the child is not 100% successful in any domain as you begin, subtract another 6 months to establish a corrected baseline.

- Look ahead at the assessment tasks before each assessment visit to make sure you have the materials (if any) needed for the child to attempt the tasks.
- Make the assessment times fun...get to know the child, be friendly and well-prepared. Make sure they are not taken out of activities they would rather be doing for the screening. Read the child's cues for stop times. If they are disengaging or seem restless, either move to a different domain or stop for the day. Assessment visits should never be more than 30 minutes long.

- Record your results for each task. Once the child has reached a point in each domain where they are unsuccessful with 3 out of five sequential tasks, you can assume you have targeted their developmental age for that domain and stop.
- Using your data collected, calculate the child's developmental age for each domain and their overall developmental age

Part 3: Child Study Post Reflection:

For this portion of your assignment you will be writing a Reflection based on your running record through the lens of what you have learned about social, emotional, physical and cognitive development for this child's developmental age.

Using the data you collected in your child study project and the completed ASQ from the child's parents, reflect on the following:

1. A summary of what you observed in terms of the child's development and learning, using examples—as applicable. Be sure to include specific information related to developmental milestones and stages and any applicable red flags. Objectivity is no longer required at this point in your assignment, as you are now making subjective observations.
2. An overview of what you observed in each developmental area. In your description, be sure to integrate theory as an infrastructure for your discussion of developmental areas.
3. Specific examples of how your observational data complemented or deviated from developmental milestones.
4. Three specific examples, based on your observation, of how each area of development interrelates.
5. A description of how contextual factors (such as race, ethnicity, language, ability, socio-economics, religion, and society) influence healthy development and learning. Based on the child you assessed, specifically, what impact might cultural, familial, biological, and environmental influences have on his or her physical and mental health, well-being, and nutrition?
6. A description of how protective factors within the environment could serve to alleviate stress and foster resiliency.

Assessment Rubric

Human Growth & Development Master Rubric

Competency	Distinguished	Proficient	Needs Improvement	Unsatisfactory	Unable to Assess
<p>HGD1: Identifies and describes theories of typical and atypical growth in all developmental domains and the interaction between individual and contextual factors on development and learning.</p>	<p>Labels and defines developmental milestones, patterns of development, and specific characteristics of delays and disabilities. Includes description of potential impact on development and learning.</p> <p>Describes how individual characteristics (including physical and mental health, well-being, and nutrition) are impacted by the cultural context (including gender, family, race, ethnicity, language, ability, socio-economics, religion, and society). Includes description of factors that support resilience.</p>	<p>Labels and defines developmental milestones, patterns of development, and specific characteristics of delays and disabilities.</p> <p>Describes how individual characteristics (including physical and mental health, well-being, and nutrition) are impacted by the cultural context (including gender, family, race, ethnicity, language, ability, socio-economics, religion, and society).</p>	<p>Labels and defines developmental milestones.</p> <p>Describes how individual characteristics are impacted by contextual factors.</p>	<p>Labels and defines developmental milestones incorrectly.</p> <p>Does not accurately describe how individual characteristics are impacted by contextual factors.</p>	
<p>HGD2: Describes the interrelationship between developmental domains, holistic well-being, and adaptive/living skills.</p>	<p>Describes interrelationship between developmental domains (physical/social/emotional/cognitive/language/aesthetic), holistic well-being (including health, nutrition, safety and environment), and adaptive/living skills.</p> <p>Current research-base is integrated into description.</p>	<p>Describes interrelationship between developmental domains (physical/social/emotional/cognitive/language/aesthetic), holistic well-being (including health, nutrition, safety and environment), and adaptive/living skills.</p>	<p>Describes developmental domains (physical/social/emotional/cognitive/language/aesthetic), holistic well-being (including health, nutrition, safety and environment), and adaptive/living skills.</p>	<p>Does not accurately describe developmental domains (physical/social/emotional/cognitive/language/aesthetic), holistic well-being (including health, nutrition, safety and environment), and adaptive/living skills.</p>
